Playdough Prints

You will need:

Playdough, everyday objects with different shaped faces.

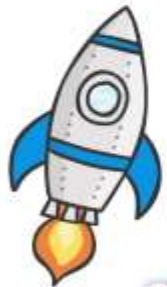

How to play:

Roll or pat a piece of playdough flat. Player 1 closes their eyes. Player 2 chooses an object from the selection and pushes into the playdough to make a print. Move the object away before Player 1 opens their eyes. Can they guess what made the print?

Mathematical ideas to explore:

- *What 2D shape have you printed on the playdough?*
- *How many corners/sides does it have?*
- *Can you describe the shape, e.g. "It has one long straight side and one long curved side."*
